

Whatever You Drive, We Have You Covered

Clean Fuel Standard - Legislation in HB 41

Whatever you drive, we've got you covered

The Clean Fuel Standard is technology-agnostic and can benefit both rural and urban communities **now**.

- There is a massive effort underway to build out infrastructure and provide incentive programs for transportation electrification – NMDOT has just been awarded nearly \$64 million in federal funding – and the Clean Fuel Standard will further accelerate that process by providing additional revenue for utilities to use to invest in that build out.
- Renewable diesel, renewable natural gas, biofuels, and fuel cells are other examples of clean fuels other than electricity that will be imported, produced and used under this program. In other words, no matter where you are located or what you choose to drive, we have you covered with a clean fuel option.
- For example, for diesel pick-up trucks or diesel school buses – renewable diesel – a fuel made from fats and oils – can drop in as a clean, efficient option. In other words, same fuel – less pollution.
- There is no reason any of our communities should be choosing between transportation and health. New Mexicans can't afford to keep paying to treat the cost of respiratory illness.
