Appendix D-1
Footnotes to Tables D-1-1 and D-1-2

[a] Lab reports for Q3 2020 data are porvided in Appendix D-2. Each report is bookmarked in the PDF using the lab report title referred to in this column.
[b] See individual lab reports for a description of lab qualifiers.
[c] The EPA MDL is equivalent to the DoD DL.
[d] The EPA RDL is equivalent to the DoD LOD.
[e] The EPA PQL is equivalent to the DoD LOQ.
[f] NM WQCC numeric standards per the NMAC Title 20.6.2.3101A, Standards for Ground Water of 10,000 mg/L Total Dissolved Solids Concentration or Less (NMAC 2018). For metals, the NM WQCC numeric standard applies to dissolved metals.
[g] EPA National Primary Drinking Water Regulations, MCLs and Secondary MCLs, Title 40CFR Part 141, 143 (May 2018).
[h] EPA Region 6 RSL for Tapwater (November 2020) for hazard index = 1.0 for noncarcinogens and a 10-5 cancer risk level for carcinogens.
[i] The project screening level was selected to satisfy the requirements of the Kirtland AFB Hazardous Waste Permit Number NM9570024423 as the lowest of (1) NM WQCC numeric standard or (2) EPA MCL. If no NM WQCC standard or MCL exists for any analyte, then the project screening level will be the EPA RSL.
< = less than
1Q2021 = first quarter, 2021
2Q2020 = second quarter, 2020
3Q2020 = third quarter, 2020
4Q2020 = fourth quarter, 2020
cas_rn = Chemical Abstract Service registry number
D = dissolved
DL = detection lmit
DoD = Department of Defense
EPA = U.S. Environmental Protection Agency
FD = field duplicate
ft = foot/feet
ID = identification
J = Qualifier denotes the analyte was positively identified, but the associated numerical value is estimated.
LOD = limit of detetion
LOQ = limit of quantitation
MCL = maximum contaminant level
MDL = method detection limit
mg/l = milligrams per liter
mgcaco3/l = milligrams of calcium carbonate per liter
N (in "detect_flag" column) = no
N (in "fraction" column) = not applicable
N (in "sample_type_code" column)= normal
NM = New Mexico
NMAC = New Mexico Administrative Code
NS = not specificed
PQL = practical quantitation limit
PSL = project screening level
RDL = report detection limit
RSL = regional screening level
T = total
U = Qualifier denotes the analyte was analyzed but not detected above the detection limit. The value associated with the U-qualifier is the LOD.
ug/l = micrograms per liter
WQCC = Water Quality Control Commission
WG = groundwater
Y = yes

Gray shaded values exceed the project screening level.

APPENDIX D-2

DATA QUALITY EVALUATION REPORT – GROUNDWATER SAMPLES (JANUARY–MARCH 2021)

LIST OF ACRONYMS AND ABBREVIATIONS

%	percent
AFB	Air Force Base
BTEX	benzene, toluene, ethylbenzene, total xylenes
BFF	Bulk Fuels Facility
CCV	continuing calibration verification
DL	detection limit
DoD	Department of Defense
DRO	diesel range organic
EB	equipment rinse blank
EDB	ethylene dibromide
ELLE	Eurofins Lancaster Laboratories Environmental, LLC
EPA	U.S. Environmental Protection Agency
GRO	gasoline range organic
GWM	groundwater monitoring
ICP	inductively coupled plasma
ICS	interference check sample
IS	internal standard
LCS	laboratory control sample
LCSD	laboratory control sample duplicate
LOD	limit of detection
LOQ	limit of quantification
MS	matrix spike
MSD	matrix spike duplicate
Q1	first quarter of the year (January 1 through March 31)
QAPP	Quality Assurance Project Plan (2020)
QC	quality control
QSM	Quality Systems Manual
RL	reporting limit
RPD	relative percent different
SDG	sample delivery group
SM	Standard Method
SW	Solid Waste
SWMU	Solid Waste Management Unit
TPH	total petroleum hydrocarbon

VOA	volatile organic analysis
VOC	volatile organic compound

D-2.1 DATA QUALITY EVALUATION REPORT GROUNDWATER SAMPLES (JANUARY–MARCH 2021)

D-2.1.1 Laboratory Data Quality Summary

This Data Quality Evaluation Report describes the findings of the data validation performed for the first quarter (Q1) 2021 groundwater monitoring (GWM) chemical analytical data collected in support of the Work Plan, Bulk Fuels Facility (BFF) Expansion of the Dissolved-Phase Plume Groundwater Treatment System Design Revision 2, Solid Waste Management Unit (SWMU) ST-106/SS-111, Kirtland Air Force Base (AFB), New Mexico (Kirtland AFB, 2017a), and the Work Plan for Installation of Data Gap Monitoring Wells (Kirtland AFB, 2017b). Sampling and analysis for the Q1 2021 GWM were conducted in accordance with the procedures and overall quality control (QC) and quality assurance protocols presented in the Work Plans and Quality Assurance Project Plan QAPP for Groundwater Monitoring and Interim Remedial Operations, BFF, SWMU ST106/SS-111, Kirtland AFB, New Mexico (Kirtland AFB, 2020).

Samples were collected from 66 GWM sample locations between January 4 through 15, 2021 from the BFF monitoring well network and newly installed wells under the data gap monitoring well and vadose zone coring programs. The Q1 wells were sampled using dual membrane passive samplers or low-flow methodology.

The following field QC samples were associated with the Q1 well sampling: 8 field duplicates, two equipment rinse blanks (EBs), 29 trip blanks, and two source water blanks for equipment rinse water. Groundwater samples were shipped to Eurofins Lancaster Laboratories Environmental, LLC (ELLE), Lancaster, Pennsylvania, for analysis. ELLE maintains a current Department of Defense (DoD) Environmental Laboratory Accreditation Program certification to perform the analyses required for this project. Sample analyses were performed in accordance with the following guidance documents:

- DoD Quality Systems Manual (QSM), Version 5.3 (DoD, 2019)
- U.S. Environmental Protection Agency (EPA) Test Methods for Evaluating Solid Waste (SW) 846, Third Edition and Updates, 1986
- Standard Methods (SM) for the Examination of Water and Wastewater, 22nd Edition (American Public Health Association, 2005)
- EPA Methods for Chemical Analysis of Water and Waste, EPA-600/4-79-020 (1983).

Q1 2021 groundwater samples were analyzed for a varying suite of analyses as shown in Appendix D-2 – Table 1. The following is a list of parameters and methods, as required per well:

- ***Volatile Organic Compounds (VOCs)—***Method SW8260C.
- ***Benzene, Toluene, Ethylbenzene, Total Xylenes (BTEX)—***Method SW8260C.
- ***Ethylene Dibromide (EDB)***—Method SW8011.
- ***Total Arsenic and Lead***—Method SW6020A.

- ***Total Calcium, Magnesium, Potassium, and Sodium; Dissolved Iron; and Manganese—*** Method SW6010C.

- ***Anions (Bromide, Chloride, and Sulfate)***—Method EPA 300.0A.

- ***Nitrate/Nitrite Nitrogen***—Method EPA 353.2.

- ***Total Alkalinity (Bicarbonate and Carbonate)—***Method SM2320B.

- ***Total Petroleum Hydrocarbons (TPH) (Gasoline Range Organics [GRO] and Diesel Range Organics [DRO])—***Method SW8015D.

Chemical analytical data for Q1 2021 were reported by ELLE in 10 sample delivery groups (SDGs). Appendix D-2 – Table 1 summarizes samples collected from monitoring wells and the associated field QC samples, collection date, laboratory SDG, and analytical parameters for the Q1 monitoring program.

A third-party subcontractor, Validata Chemical Services, Duluth, Georgia, conducted EPA Stage 2B data validation on 100 percent (%) of the Q1 2021 sample data associated with the BFF monitoring network.

Analytical data validation was performed using the quality criteria specified in the following analytical guidelines and methods as applicable:

- Work Plan (Kirtland AFB, 2017a)

- Work Plan (Kirtland AFB, 2017b)

- QAPP (Kirtland AFB, 2020)

- DoD QSM for Environmental Laboratories, Version 5.3 (DoD, 2019)

- EPA Test Methods for Evaluating Solids Waste, Physical/Chemical Methods (SW 846, Third Edition and updates) (1986)

- American Public Health Association, Standard Methods for the Examination of Water and Wastewater, 22nd Edition (2005)

- EPA Methods for Chemical Analysis of Water and Wastes, EPA-600/4-79-020 (1983)

- EPA Contract Laboratory Program, National Functional Guidelines for Superfund Organic Methods Data Review (EPA, 2017a)

- EPA Contract Laboratory Program, National Functional Guidelines for Inorganic Superfund Data Review (EPA, 2017b).

The following QC criteria were included in the EPA Stage 2B validation per the QAPP, as applicable to the analytical method:

- Sample preservation and extraction and analysis holding times
- Laboratory method blank contamination
- Surrogate spike and internal standard (IS) recoveries (organic analyses)

- Laboratory control sample (LCS) and LCS duplicate (LCSD) recoveries
- Matrix spike (MS) and matrix spike duplicate (MSD) sample recoveries
- Relative percent difference (RPD)
- Initial and continuing calibrations
- Inductively coupled plasma (ICP) interference check samples (metals)
- ICP serial dilutions (metals)
- Second column confirmation (for EDB only)
- Trip, EB, field blank, and source water blank results
- Field duplicate sample precision.

Analytical data were reviewed to evaluate precision, accuracy (bias), representativeness, comparability, completeness, and sensitivity as defined below:

- *Precision* is expressed as the RPD between the results of replicate sample analyses: sample duplicates, LCSDs, and MSDs. When analyte RPDs exceed the acceptance criteria, the data are qualified accordingly.

- *Accuracy (bias*) is demonstrated by recovery of target analytes from fortified blank and sample matrices, LCS/LCSD, and MS/MSD, respectively. For organic methods, bias is also demonstrated through recovery of surrogates from each field and QC sample. A comparison was made from the recovery of target analytes from fortified samples to the acceptance criteria defined in the QAPP (Kirtland AFB, 2020) and DoD QSM (2019). When the acceptance criteria are not available in the QAPPs or DoD QSM, results are compared with the laboratory in-house control limits. When these criteria are not met, the data are qualified accordingly. Bias may be indicated as high or low.

- *Representativeness* of the samples submitted for analysis is ensured by adherence to standard sampling techniques and standard analytical method protocols.

- *Comparability* of sample results is ensured through the use of approved sampling and analysis methods and comparison of sample results to historical sample data.

- *Completeness* of data is evaluated based on contractual, analytical, and technical criteria for data analysis. Technical completeness of data is used to assess overall project data completeness and is expressed as a percentage of the ratio of the number of usable data results to the total number of analytical data results. Only rejected data (R-qualified) are considered not usable to achieve project objectives.

- *Sensitivity* is determined by the ability to achieve the established method-specific reporting limits (RLs) in accordance with DoD QSM requirements and includes establishing the detection limit (DL), limit of detection (LOD), and limit of quantitation (LOQ). The DoD DL is commonly associated with the EPA method detection limit (MDL), the lowest concentration that an analyte can be detected per the analytical method. The DoD LOD is commonly associated with the EPA sample-specific reporting limit (RL), the limit at which the detected analyte is reported with 99 percent confidence. The DoD LOQ is associated with the EPA practical quantitation limit (PQL), the limit an analyte can be reported at 100 percent confidence and within method precision and accuracy. Per DoD QSM reporting requirements, sample results below the LOQ and above the DL are reported with a "J" qualifier, signifying estimated data. Non-detect sample results are reported with a "U" qualifier at the LOD. Sensitivity is evaluated based on comparison of the sample RLs to the project screening levels.

The following sections present the EPA Stage 2B data validation findings. The discussion summarizes data quality exceedances and their potential impact on the quality and usability of analytical results.

Appendix D-2 – Table 2 presents the definitions of data qualification and the reasons why these codes were applied to the analytical results. Appendix D-2 – Table 3 summarizes the qualified analytical data for Q1 2021 based on data validation findings.

D-2.2 DATA QUALITY FINDINGS

D-2.2.1 Sample Preservation and Sample Extraction and Analysis Holding Times (Reason Code HT)

The sample coolers and samples contained within the coolers were received intact at the laboratory at ≤6 degrees Celsius, per EPA guidelines. All samples were preserved appropriately per the requirements of EPA methods and SM with no exceptions. Sample holding times were evaluated by comparing (1) the sample collection date to the sample extraction date, and (2) the extraction date to the analysis date to determine if the method-specified holding times were exceeded. Q1 2021 sample extraction and analysis holding times were met for all reported sample data.

D-2.2.2 Laboratory Method Blanks (Reason Code MB)

The field sample results were evaluated with respect to the laboratory method blank prepared and analyzed for each analytical batch and each analytical method. Based on the DoD QSM requirements (2019), laboratory method blank concentrations are considered acceptable when contaminant levels in the blank are less than one-half the LOQ for target analytes and less than the LOQ for common laboratory contaminants. Low-level detections of iron, bromide and sulfate were reported in the method blank samples in SDG 410-25683-1 (bromide), and 410-25906-1 (bromide, sulfate, iron). Associated sample results were qualified "U" signifying non-detect results. There were no other analyte detections in Q1 2021 method blank samples that resulted in qualified data. Qualified Q1 2021 sample data based on method blank detections are presented in Appendix D-2 – Table 3.

D-2.2.3 Initial and Continuing Calibration Blanks (Reason Code CB/CCB)

Initial and continuing calibration blank criteria were reviewed to ensure that the instruments were free of contamination prior to sample analysis. Based on the DoD QSM requirements (2018, 2019), calibration blank concentrations are considered acceptable when contaminant levels in the blank are less than one-half the LOQ for target analytes and less than the LOQ for common laboratory contaminants. Initial and continuing calibration blank data were within control criteria for the Q1 2021 sample analyses with exception of low-level detections of bromide and sulfate in the CCB for SDG 410-25906-1. Associated sample results were qualified "U" signifying non-detect results. Qualified Q1 2021 sample data based on CCB detections are presented in Appendix D-2 – Table 3.

D-2.2.4 Surrogate and Internal Standard Recoveries (Reason Code SURR/IS)

Surrogate and internal compounds are added to field and laboratory QC samples for organic analysis to evaluate the matrix effect and method performance on an individual sample basis. Surrogate and IS recoveries for the Q1 2021 sample data were within method control criteria for all samples or did not result in qualified data since recoveries were above the control limit and results were non-detect.

D-2.2.5 Laboratory Control Sample/Laboratory Control Sample Duplicate Recoveries and Precision (Reason Codes LCS/RPD)

The LCS is an aliquot of an analyte-free matrix spiked with target analytes that are prepared with each analytical batch for each analytical method. The recovery of target analytes from the LCS analysis is a measurement of method performance in an interference-free sample matrix. LCS recoveries for the Q1 2021 data were within method control limits with the exception of one LCS for manganese in SDG 410-25765-1. Associated sample results were qualified "J". Qualified Q1 2021 sample data based on LCS recoveries are presented in Appendix D-2 – Table 3.

D-2.2.6 Matrix Spike/Matrix Spike Duplicate Recoveries and Laboratory Duplicate Sample Precision (Reason Codes MS/MSD and RPD)

The MS and MSD samples are a portion of a field sample spiked with target analytes that are prepared with each analytical batch and method as appropriate. The MS/MSD results are used to evaluate any bias introduced to the method due to matrix interference, and to measure bias and precision for each analytical batch. For some analytical parameters (inorganic and general chemistry), standard reference materials were also analyzed to determine analytical method precision and accuracy. Also discussed in this section are laboratory duplicate samples analyzed by the laboratory to assess method precision for metals analysis.

In accordance with the QAPP requirements, the additional volume for MS/MSD samples was collected at a rate of one per 20 groundwater samples. During the Q1 2021 sampling event, four MS/MSD samples were collected associated with the 66 monitoring well samples and analyzed for the well-specific analytical parameters as identified in Appendix D-2 – Table 1. Additional MS/MSD samples were analyzed by the laboratory as necessary to meet method and analytical batch requirements.

Sample-specific MS/MSD analyte recoveries exceeded control criteria for VOCs (toluene and ethylbenzene), and chloride in SDG 410-,25765-1 and chloride in SDG 410-25683-1. Associated sample results were qualified "J." There were MS/MSD exceedances for other analytes however the sample concentration was four times the spike amount so data were not qualified. Sample results qualified based on MS/MSD recoveries are presented in Appendix D-2 – Table 3.

Laboratory duplicate/replicate samples were analyzed by the laboratory to meet metals method requirements to assess method precision. Sample results were within method control limits for the Q1 laboratory duplicate/replicate QC sample recoveries.

D-2.2.7 Initial and Continuing Calibration Verification (Reason Code CCV)

Instrument calibration is performed for all analyses in accordance with method requirements. The linear analytical range is established for each method by analysis of calibration standards prepared at increasing concentrations that cover the expected sample concentration range. The acceptability of the initial calibration is determined by calculation of a percent relative standard deviation or coefficient. Routinely during sample analysis, the stability of the analytical system is monitored by analysis of continuing calibration standards at concentrations near the mid-point of the instrument calibration range. The percent difference values between the relative response factor in the initial calibration and the relative response factor in the continuing calibration are reviewed to ensure instrument calibration criteria are within method control limits. Initial and continuing calibration verification (CCV) met the method-specific control criteria for the Q1 2021 analytical data with exception of dichlorodifluoromethane in SDG 410-26694-1, chloride in SDG 410-25683-1, and EDB in several SDGs where the CCV for the second column exceeded the control criteria however, the sample results were reported from the primary column.

Associated sample results were qualified "J and UJ". Qualified Q1 2021 sample data based on CCV exceedances are presented in Appendix D-2 – Table 3.

D-2.2.8 Interference Check Sample (Reason Code ICS)

The interference check sample (ICS) verifies the inter-element and background correction factors for metals analysis using ICP instrumentation. The ICSs were analyzed at the required frequencies, and all ICS results are within the established control criteria for the ICP analytical methods for the Q1 2021 analytical data.

D-2.2.9 Inductively Coupled Plasma Serial Dilution (Reason Code SD)

The ICP serial dilution determines whether significant physical or chemical interferences exist due to sample matrix. When the concentration of an analyte exceeds 50 and 100 times the DL for ICP and ICP mass spectrometry analysis, respectively, the ICP serial dilution is performed and the results between the original analysis and the diluted analysis are compared. The results of the ICP serial dilution are deemed acceptable when a percent difference between the original analysis and the diluted analysis is less than or equal to 10%. An ICP serial dilution was performed based on the above criteria for the Q1 samples as deemed appropriate. ICP serial dilution results were within control criteria for all samples and analytes for Q1 2021 data. No data were qualified based on serial dilution criteria.

D-2.2.10 Sample Confirmation (Reason Code RPD)

As required by DoD and EPA analytical method guidance, sample detections for EDB require confirmation using a second column analysis. EDB samples for Q1 2021 were analyzed by EPA Method SW8011, confirmed by a second column analysis, and reported from the primary column. Any detection of EDB on the second column is considered confirmation unless it appears to be associated with matrix interferences. There were no data reporting issues associated with EDB detections however as noted in section D-2.2.7, there were exceedances of the confirmation column CCV, but data were reported from the primary column.

D-2.2.11 Field Blanks for Volatile Organic Compounds (Reason Code FB)

Field blanks serve as a check for possible VOCs in air associated with a sampling location. The field blanks are prepared in the field during sampling by pouring ultra-pure water into EPA-certified clean sample containers and exposing the container to the environment at a particular sample location that may be associated with airborne VOCs.

Field blank samples are collected as deemed necessary at the time of sampling based on site conditions and potential for airborne VOC contamination. During the Q1 2021 GWM event, field blank samples were not deemed necessary for collection.

D-2.2.12 Trip Blanks (Reason Code TB)

Trip blanks were prepared by the laboratory and are stored with the containers to be used for collection of aqueous samples to be analyzed for VOCs, EDB, and TPH-GRO. As samples are collected for volatile-type analyses, trip blanks are placed in the cooler with the sample containers; therefore, they are exposed to any potential contamination along with the field samples. In accordance with the QAPP requirements, trip blank samples are to be included at a rate of one per cooler when collecting water samples for volatile organic-type analyses. A total of 29 trip blank samples were shipped during Q1 accompanying samples for VOCs, EDB, or TPH-GRO analysis. No detections were reported in Q1 trip blank samples. Appendix D-2 – Table 4 summarizes the results for trip blank samples for the Q1 2021 sampling event.

D-2.2.13 Equipment Rinse Blanks (Reason Code EB)

EBs are collected in the field to assess potential contamination from sampling equipment. Results for the EB samples are used to evaluate the efficiency of equipment decontamination procedures in the field. Two EB samples and two source water blank samples were collected during the Q1 sampling event. The EB samples were prepared by rinsing the decontaminated sampling equipment with water provided by Environmental Sampling Supply (source water) or Crystal Springs water, and then collecting the final rinse water into appropriate sample containers for analysis. The EB samples associated with the Q1 sampling event were analyzed for VOCs, BTEX, EDB, metals, and TPH-GRO/DRO. The source water samples were also collected and analyzed for EDB, BTEX and metals. Low-level detections of toluene, TPH-DRO, lead, calcium, and sodium were detected in EB samples. Only potassium was detected in the source water blank samples. Associated sample detects for lead only in SDG 410-26001-1 and 410-26694-1 were qualified "U," signifying non-detect data. There were no detects of the other analytes in the associated samples that resulted in data qualification. The rinse blank and source water blank sample results were acceptable to demonstrate the equipment decontamination procedures for the Q1 2021 sampling event achieved project objectives. Qualified Q1 2021 sample data based on EB detections are presented in Appendix D-2 – Table 3. Appendix D-2 – Table 4 presents the results of the Q1 2021 EB and source water blank samples.

D-2.2.14 Field Duplicate Samples

In accordance with the project QAPP requirements (Kirtland AFB, 2020), field duplicate samples are collected at a frequency of 10% of the total number of groundwater samples for the Q1 event. Eight field duplicate samples were collected for a total of 66 groundwater samples for the Q1 event. The 10% frequency for field duplicate samples was achieved at 12% for Q1 2021 sampling.

Field duplicate RPD is evaluated by calculating the RPD between the parent sample and the duplicate sample. The RPD was calculated using the following equation:

$$RPD = |(S-D)/[(S+D)/2]| \times 100$$

where

S = Sample result.
D = Duplicate result.

Acceptable precision control criteria are established at less than or equal to 35% for water samples. The RPD was calculated between pairs of field duplicate samples when both results are reported at or above the LOQ. Field duplicate sample results exceeded the RPD for bromide in GW009-211 parent sample and GW009-611 duplicate sample resulting in "J" qualified bromide results. All other field duplicate samples achieved the acceptable precision control criterion for the Q1 sampling event. Qualified Q1 2021 sample data based on field duplicate precision are presented in Appendix D-2 – Table 3. The results for the field duplicate samples collected during Q1 2021 are presented on Appendix D-2 – Table 5. The field duplicate results demonstrate acceptable overall field sampling procedures and analytical method precision.

D-2.2.15 Estimated Sample Data Above Project Screening Levels

During Q1 2021 detections above the project screening level for EDB in six samples and manganese in three samples were "J" qualified as a result of data validation and exceedance of data quality criteria for EDB CCV and manganese LCS. Appendix D-2 – Table 6 presents the results for the samples with "J"

qualified results above the project screening level. Data validation guidelines determine these data to be usable and achieve project data quality objectives.

D-2.2.16 Groundwater Results with LOQ/PQL Exceeding the Project Screening Level

During Q1 2021, 33 detect and non-detect sample results were reported with LOQ/PQLs that exceeded the project screening level. Twenty-three detections of EDB, benzene, and TPH-GRO above the project screening level exhibited elevated LOQ/PQLs as a result of the high concentration of these analytes in the sample and therefore, requiring sample dilution during analysis. Ten VOC analytes exhibited elevated LOQ/PQLs due to the high concentrations of EDB and benzene in the samples. Elevated concentrations of target analytes in a sample results in sample dilution during analysis in order to meet DoD QSM and EPA analytical method criteria. When samples require dilution, all analyte reporting limits become elevated by the amount of the dilution and thus resulting in the exceedances listed in Appendix D-2─Table 7. Data validation guidelines determine these data to be usable and achieve project data quality objectives.

D-2.2.17 Professional Judgement

Professional judgement may be applied by a third-party data validation subcontractor or the project chemist during the data review process to apply validation qualifiers based on site-specific knowledge, historical data, comparability of data, and analytical expertise. For Q1 no professional judgement was used to add or revise data qualifiers that were applied by the validation subcontractor.

D-2.2.18 Analytical Deviations

No analytical deviations were noted for the Q1 2021 GWM event. As stated in Section D-2.1.1, samples were analyzed for the required parameters and analytes and per the appropriate analytical methods and requirements.

D-2.3 COMPLETENESS

The following sections present a discussion of contractual, analytical, and technical completeness for the Q1 2021 analytical data. Completeness calculations were performed for the samples that are used for project decisions. Completeness results are presented in the following sections.

D-2.3.1 Contractual Completeness

Contractual completeness is a quantitative determination of the number of unqualified results compared to the total number of sample results expressed as a percentage, based on data qualified for QC outliers related to analytical method performance. These include data qualified for calibration or method blank contamination, missed holding times, LCS recovery, and/or precision. The contractual completeness goal is 95%. Contractual completeness was calculated as follows:

$$\text{Percent Contractual Completeness} = \frac{\text{Number of Unqualified Results}}{\text{Total Number of Results}} \times 100$$

Fourteen analytes were “U” and “J” qualified based on calibration or method blank contamination and LCS recovery, out of a total of 693 analyte results. Groundwater sample contractual completeness for Q1 is 98%. The 95% contractual completeness objective was achieved for all of the methods for the Q1 2021 sampling event.

D-2.3.2 Analytical Completeness

Analytical completeness is a quantitative measure of the number of unqualified data results compared to the total number of results expressed as a percentage, based on the target analytes qualified for exceedances of QC requirements associated with calibration, LCS, MS/MSD, surrogate, method precision, blank contamination, and field duplicate RPD. The analytical completeness goal is 90% for the project. Analytical completeness was calculated as follows:

$$\text{Percent Analytical Completeness} = \frac{\text{Number of Unqualified Results}}{\text{Total Number of Results}} \times 100$$

A total of 65 analytes were qualified "U," "J," and "UJ" based on lab/field blank contamination, CCV, LCS, MS/MSD, and field duplicate RPD out of a total number of 693 analyte results, for an analytical completeness of 90.6%. Analytical completeness achieved the 90% completeness objective for the Q1 2021 sampling event.

Estimated data (J and UJ-qualified) achieve data quality objectives and are usable to achieve project objectives. No analytical data for GWM samples were rejected (R-qualified) and qualified unusable based on analytical completeness for the Q1 2021 sampling event.

D-2.3.3 Technical Completeness

Technical completeness is a quantitative measure of the data usability based on the number of rejected data compared to the total number of sample results. The technical completeness goal for each quarterly event is equal to or greater than 95%. The technical completeness calculation considers all data that are not rejected (R-qualified) usable data to achieve project objectives. The technical completeness was calculated as follows:

$$\text{Percent Technical Completeness} = \frac{\text{Number of Usable Results}}{\text{Total Number of Results}} \times 100$$

The project data quality objectives were achieved for all methods for the Q1 sampling event. No data were rejected, and the technical completeness for the Q1 2021 groundwater data is 100% for all parameters and is provided in Appendix D-2 – Table 8.

D-2.3.4 Data Analysis Completeness

As a part of the data review process, chain-of-custody forms and project data deliverables are reviewed against Table 4-5 – Groundwater Monitoring Wells Sampled in Q1 2021 from the main report to ensure compliance with the sampling plans, and that analytical results were reported for all planned methods and samples.

Data deliverable completeness for Q1 data deliverables was determined to be 100% complete as received from the laboratory. Level II analytical data packages for Q1 2021 groundwater data are provided in Appendix D-3. Level IV data packages are available upon request.

D-2.4 REPRESENTATIVENESS AND COMPARABILITY

Q1 2021 BFF well network and vadose zone well sampling was conducted in accordance with the sampling and analysis protocols and standard operating procedures documented in the Work Plans

(Kirtland AFB, 2017a, 2017b). Approved procedures were used to collect, preserve, document, and ship samples to ELLE, thus ensuring the samples collected for the Q1 2021 sampling event were representative of the project site and conditions.

Groundwater samples for VOCs, EDB, and TPH-GRO analyses were collected in 40-milliliter volatile organic analysis (VOA) vials preserved with hydrochloric acid and shipped to ELLE at ≤6 degrees Celsius. Samples received in VOA vials were inspected to evaluate the presence of any headspace (estimated in millimeters) and documented as sample condition on the laboratory sample receipt report. Following EPA guidance and laboratory standard operating procedure, the laboratory analyzed the VOC, EDB, and TPH-GRO VOA vials without headspace, if available, to ensure that the reported data were representative. The presence of bubbles in the vials could be attributed to imperfections of the septa seal and/or septa expansion and contraction due to temperature changes during shipping samples from the field to the laboratory. To minimize VOC losses and possible low-biased data reported from the laboratory, samplers performed a visual inspection of the VOA vials prior to sample shipping to avoid shipping any VOA vials with headspace to the laboratory. If large bubbles appeared in the vials upon closing the lid over the sample container, the samples were re-collected; containers were never topped off with additional volume. Analysts at the laboratory also performed a visual inspection of VOA vials prior to analysis to ensure analysis of sample vials without headspace, if available. All Q1 groundwater samples were analyzed from VOA vials without headspace.

The project laboratory (ELLE) maintains current DoD Environmental Laboratory Accreditation Program certification and adhered to the analytical methods documented in the project QAPP and DoD QSM requirements to prepare and analyze samples and report the data. This certification ensures the comparability of the analytical results between different samples and different sampling events. For the Q1 2021 groundwater data, an EPA Stage 2B data review was performed on 100% of the analytical data to verify that the laboratory complied with the DoD QSM, the project QAPP, and method requirements. QC results that exceeded method control criteria resulted in data qualification as presented in the previous sections. Based on a review of the completed sample collection logs, chain-of-custody forms, sample receipt forms, and laboratory data packages, the analytical data reported for the Q1 2021 monitoring event achieved the project data representativeness and comparability requirements.

D-2.5 SENSITIVITY

Data sensitivity for Q1 2021 was achieved by complying with the analytical method guidelines and RLs specified in the project QAPP. The analytical methods used for groundwater analysis achieved the project screening levels for the monitoring well samples: EPA National Drinking Water Regulations, Maximum Contaminant Levels (EPA, 2018); New Mexico Administrative Code Title 20 Chapter 6 Part 2.3103, Standards for Ground Water of 10,000 Milligrams per Liter Total Dissolved Solids Concentration or Less (New Mexico Administrative Code, 2018); and EPA Region 6 Regional Screening Levels for Tapwater (EPA, 2019), as applicable. Project screening levels for groundwater samples are presented in the QAPP Worksheet 15, Table 15-1 (Kirtland AFB, 2020).

Elevated sample RLs are associated with elevated concentrations of target analytes in the samples requiring dilution or due to sample matrix interference. Samples that require dilution during analysis in order to bring elevated concentrations into the calibration range, are valid data and deemed usable and meet project data quality objectives. For the analytical results, detections of target compounds reported below the LOQ are "J"-flagged as estimated values. Non-detect analytes are reported at the LOD per the DoD QSM requirements unless as noted above.

D-2.6 CONCLUSIONS

The analytical data reported for the Q1 2021 GWM event have been reviewed for precision, accuracy (bias), representativeness, comparability, completeness, and sensitivity. Data quality exceedances that resulted in data qualification include the following criteria exceedances: (1) method blank, calibration blank, and EB contamination, (2) CCV, (3) LCS recoveries, (4) MS/MSD recoveries, and (5) field duplicate RPD. Analytical data are qualified as estimated detect and non-detect data results. Estimated sample data are usable to achieve project objectives. The 95% technical completeness goal was achieved for the Q1 2021 sampling event. Data are usable to achieve the project data quality objectives as qualified based on validation.

Table D-2-1
Groundwater Sample Collection Summary, Q1 2021

[a]Analytical methods include: Method SW8260C for VOCs; Method SW8011 for EDB; Methods SW6010C/6020A for total metals (calcium, potassium, magnesium, sodium /arsenic and lead); Method SW6010C for dissolved iron and manganese. Anion analyses include Method E300.0A for bromide, chloride and sulfate; Method E353.2 for nitrate/nitrite. Alkalinity is analyzed by Method SM2320B. TPH-DRO and TPH-GRO were analayzed by Method SW8015D.

— = no comments
EDB = 1,2-dibromoethane (ethylene dibromide)
ID = identification
MS = matrix spike
MSD = matrix spike duplicate
Q1 = first quarter
TPH-DRO = Total Petroleum Hydrocarbons – Diesel Range Organics
TPH-GRO = Total Petroleum Hydrocarbons – Gasoline Range Organics
VOCs = volatile organic compounds

Table D-2-2
Data Qualification Flags and Reason Codes

Data Qualifier Definitions for Data Validation

Qualifier	Definition
	No Qualifier indicates that the data are acceptable both qualitatively and quantitatively.
U	The analyte was analyzed for but was not detected above the detection limit. The value associated with the U-qualifier is the limit of detection.
J	The analyte was analyzed for and was positively identified, but the reported numerical value may not be consistent with the amount actually present in the environmental sample. Results are estimated, although the data are considered usable and may be used as appropriate to meet project objectives. Results are qualitatively acceptable and quantitatively uncertain.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limit is approximate and may be inaccurate or imprecise.
R	The analyte was analyzed for, but the presence or absence of the analyte has not been verified. Re-sampling and re-analysis may be necessary to confirm or deny the presence of the analyte. Results are rejected, and data are unusable for any purposes.
X	The sample results were affected by serious deficiencies in the ability to analyze the sample and to meet published method and project QC criteria. The presence or absence of the analyte cannot be substantiated by the data provided. Acceptance or rejection of the data should be decided by the project team (includes project chemist).

Reason Codes for Data Validation

Reason Code	Description
CB/CCB	Calibration blank or continuing calibration blank outside of control limits
CCV	Calibration verification outside of control limits
EB	Equipment rinse blank contamination
FB	Field blank contamination
FD	Field duplicate sample results out of control criteria
HT	Holding time exceedance
ICS	Interference check sample
LCS	Laboratory control sample recovery out of control criteria
MB	Method blank contamination
MS/MSD	Matrix spike/ matrix spike duplicate recovery outside of control criteria
RPD	Relative percent difference outside of control limits
SD	Inductively Coupled Plasma serial dilution out of control criteria
SURR	Surrogate recovery outside of control limits
TB	Trip blank contamination

[a] The limit of detection was raised to the limit of quantitation

DF = diffusion bag sampler

FD = Field duplicate

ID = identification

LF = low flow sampling

MS/MSD = matrix spike/matrix spike duplicate

N = normal field sample

Q1 = first quarter

RPD = relative percent difference

Data Qualifiers:

J = Qualifier denotes the analyte was positively identified, but the associated numerical value is estimated.

U = Qualifier denotes the analyte was analyzed for but was not detected above the detection limit.

Table D-2-4
Field Quality Control Sample Results, Q1 2021

µg/L = microgram per liter.
— = Compound not analyzed for.
EB = equipment rinse blank
EDB = 1,2-dibromoethane (ethylene dibromide)
ID = identification
LOD = limit of detection
mg/L = milligram per liter
ND = not detected above the detection limit
Q1 = first quarter
SWB = source water blank
TB = trip blank
TPH-DRO = Total Petroleum Hydrocarbons – Diesel Range Organics
TPH-GRO = Total Petroleum Hydrocarbons – Gasoline Range Organics
Val Qual = validation qualifier
VOC = volatile organic compound
Shading = analyte was detected
Qualifiers:
Val Qual based on independent data validation.
J = Qualifier denotes the analyte was positively identified, but the associated numerical value is estimated.
U = Qualifier denotes the analyte was analyzed but not detected above the detection limit. The value associated with the U-qualifier is the LOD.
-- = Validation qualifier not assigned.

Table D-2-5
Field Duplicate Sample Results, Q1 2021

[a] NM WQCC numeric standards per the NMAC Title 20.6.2.3101A, Standards for Ground Water of 10,000 mg/L Total Dissolved Solids Concentration or Less (NMAC 2018). For metals, the NM WQCC numeric standard applies to dissolved metals.

[b] EPA National Primary Drinking Water Regulations, MCLs and Secondary MCLs, Title 40CFR Part 141, 143 (May 2018).

[c] EPA Region 6 RSL for Tapwater (November 2020) for hazard index = 1.0 for noncarcinogens and a 10-5 cancer risk level for carcinogens.

[d] The project screening level was selected to satisfy the requirements of the Kirtland AFB Hazardous Waste Permit Number NM9570024423 as the lowest of (1) NM WQCC numeric standard or (2) EPA MCL. If no NM WQCC standard or MCL exists for any analyte, then the project screening level will be the EPA RSL.

[e] Based on the geochemical equilibrium of the site groundwater and previous site data analyses, nitrate/nitrite results represent nitrate concentrations.

— = Compound not analyzed for.
µg/L = microgram per liter
AFB = Air Force Base
AMSL = above mean sea level
BFF = Bulk Fuels Facility
bgs = below ground surface
$CaCO_3$ = calcium carbonate
CFR = Code of Federal Regulations
EDB = 1,2-dibromoethane (ethylene dibromide)
EPA = U.S. Environmental Protection Agency
ft = foot/feet
ID = identification
LOD = limit of detection
MCL = maximum contaminant level
mg/L = milligram per liter
ND = not detected
NM = New Mexico
NMAC = New Mexico Administrative Code
NS = not specified
Q1 = first quarter
REG = normal field sample
RSL = regional screening level
SWMU = Solid Waste Management Unit
Val Qual = validation qualifier
VOC = volatile organic compound
WQCC = Water Quality Control Commission
Shading = analyte was detected
Bold/Shading = reported concentrations exceed the project screening level
Val Quals based on independent data validation
J = Qualifier denotes the analyte was positively identified, but the associated numerical value is estimated.
U = Qualifier denotes the analyte was analyzed but not detected above the detection limit. The value associated with the U-qualifier is the LOD.
-- = Validation qualifier not assigned.

[a] The project screening level was selected to satisfy the requirements of the Kirtland AFB Hazardous Waste Permit No. NM9570024423 as the lowest of (1) NM WQCC standard or (2) EPA MCL. If no MCL or NM WQCC standard exists for any analyte, then the project screening level will be the EPA Tapwater RSL.

µg/L = microgram per liter

AFB = Air Force Base

CCV = continuing calibration verification

EPA = U.S. Environmental Protection Agency

ID = identification

LCS = laboratory control spike

LOD = limit of detection

MCL = maximum contamination level

mg/L = milligram per liter

N = Field sample

NM = New Mexico

Q1 = first quarter

RSL = regional screening level

WQCC = Water Quality Control Commission

Qualifiers:

Val Quals based on independent data validation

J = Denotes the analyte was positively identified, but the associated numerical value is estimated.

Table D-2-7
Groundwater Results with LOQ/PQL Exceeding the Project Screening Level, Q1 2021

[a] The MDL is equivalent to the DoD DL.

[b] The RDL is equivalent to the DoD LOD.

[c] The PQL is equivalent to the DoD LOQ.

[d] The project screening level was selected to satisfy the requirements of the Kirtland AFB Hazardous Waste Permit Number NM9570024423 as the lowest of (1) NM WQCC numeric standard or (2) EPA MCL. If no NM WQCC standard or MCL exists for any analyte, then the project screening level will be the EPA RSL. NM WQCC numeric standards per the NMAC Title 20.6.2.3101A, Standards for Ground Water of 10,000 mg/L Total Dissolved Solids Concentration or Less (NMAC 2018). For metals, the NM WQCC numeric standard applies to dissolved metals. EPA Region 6 RSL for Tapwater (November 2020) for hazard index = 1.0 for noncarcinogens and a 10-5 cancer risk level for carcinogens.

< = less than

µg/l = micrograms per liter
AFB = Air Force Base
DL = detection lmit
DoD = Department of Defense
EPA = U.S. Environmental Protection Agency
FD = field duplicate
ID = identification
LOD = limit of detetion
LOQ = limit of quantitation
MCL = maximum contaminant level
MDL = method detection limit
N = normal
NM = New Mexico
NMAC = New Mexico Administrative Code
NS = not specificed
PQL = practical quantitation limit
Q1 = first quarter
RDL = report detection limit
RSL = regional screening level
WQCC = Water Quality Control Commission
Shading = result exceeds the project screening level.
Qualifiers based on independent data validation:
J = Qualifier denotes the analyte was positively identified, but the associated numerical value is estimated.
U = Qualifier denotes the analyte was analyzed but not detected above the detection limit. The value associated with the U-qualifier is the LOD.
-- = Qualifier not assigned.

Table D-2-8
Technical Data Completeness - Groundwater, Q1 2021

Analytical Parameter	Field/Field Duplicate Sample Analytes	Quality Control Sample Analytes (TB, FB, EB, SWB)	Qualified Analytes	Percent Technical Completeness[a]
1,2-dibromoethane (SW8011)	74	31	38	100
VOCs (SW8260C)[b]	181	194	3	100
Total metals (SW6010C)[c]	116	8	0	100
Dissolved metals (SW6010C)[d]	58	0	5	100
Total metals (SW6020A)[e]	58	4	2	100
Anions (E300.0)[f]	87	0	17	100
Nitrate/nitrite nitrogen (E353.2)	29	0	0	100
Alkalinity (SM2320B)	87	0	0	100
TPH (SW8015)[g]	3	4	0	100

[a] Percent technical completeness including analytes qualified as estimated data. No data were rejected.

[b] KAFB-106S10-443 and the associated TB and EB samples were analyzed for VOCs, the other samples were analyzed for BTEX.

[c] Total metals (SW6010C) = calcium, magnesium, potassium, sodium.

[d] Dissolved metals (SW6010C) = dissolved iron, manganese.

[e] Total metals (SW6020A) = arsenic, lead.

[f] Anions = bromide, chloride, sulfate.

[g] TPH (SW8015) = TPH-GRO, TPH-DRO, and total TPH. KAFB-106S10-443 and the associated TB and EB samples only.

BTEX = benzene, toluene, ethylbenzene, xylenes
EB = equipment rinse blank
FB = Field blank
Q1 = first quarter
SWB = source water blank
TB = trip blank
TPH-DRO = Total Petroleum Hydrocarbons – Diesel Range Organics
TPH-GRO = Total Petroleum Hydrocarbons – Gasoline Range Organics
VOCs = volatile organic compounds

VOA	volatile organic analysis
VOC	volatile organic compound

LABORATORY DATA QUALITY ASSESSMENT

This Data Quality Assessment describes the findings of the review of data for the January 2021 quarterly groundwater monitoring event, which occurred in First Quarter 2021 and is provided to document the quality of the analytical data used in the *Q1 2021 Quarterly Summary Memorandum, In Situ Biodegradation Long-Term Monitoring, Bulk Fuels Facility, Solid Waste Management Units ST-106/SS-111*. Sampling procedures and overall quality control (QC) and quality assurance protocols for the January 2021 quarterly groundwater monitoring event are presented in the *Final Uniform Federal Policy Quality Assurance Project Plan, Bulk Fuels Facility, Solid Waste Management Units ST-106/SS-111, Kirtland Air Force Base, Albuquerque, New Mexico* (QAPP, Kirtland Air Force Base [KAFB], 2020).

The Data Quality Assessment focuses on the data quality and data usability of the samples collected from the January 2021 groundwater monitoring sampling event at monitoring wells (KAFB-106064, KAFB-106063, KAFB-106MW1-I, KAFB-106MWI-S, KAFB-106MW2-I, KAFB-106MW2-S, KAFB-106IN1, KAFB-106EX1, and KAFB-106EX2).

All quarterly groundwater samples from the nine wells were analyzed for the following of parameters:

- Volatile organic compounds (VOCs) – U.S. Environmental Protection Agency (EPA) Method SW8260C
- 1,2-dibromethane (EDB) – EPA Method SW8011
- Total lead and dissolved iron and manganese – EPA Method SW6020A
- Anions (chloride, sulfate, bromide, nitrate and nitrite as nitrogen) – EPA Method SW9056A
- Dissolved ortho-phosphate – EPA Method 365.3
- Alkalinity – Standard Method (SM) 2320B
- Iodide – EPA Method 300

- Dissolved gases – RSK 175
- Fatty acids – EPA Method 300 modified
- Quant Array Chlor – Laboratory Standard Operating Procedure (SOP)

All groundwater samples were shipped to off-site laboratories for analysis. Groundwater samples for Quant Array Chlor analysis were performed by Microbial Insights in Knoxville Tennessee. The analysis of dissolved gases and fatty acids was conducted by Aptim Lawrenceville New Jersey; while the analysis of iodide was completed by ALS Laboratories (ALS) in Cincinnati, Ohio. Microbial Insights, Aptim Lawrenceville, and ALS in Middletown are not U.S. Department of Defense (DoD) accredited laboratories. The remaining listed analyses for the quarterly groundwater samples were performed by ALS in Houston, Texas. ALS in Houston holds a current DoD Environmental Laboratory Accreditation Program (ELAP) certification version 5.3.

All analytical results from the January 2021 quarterly groundwater monitoring event were reported by the off-site laboratories and received in sample delivery groups (SDGs). Appendix B-1, Table 1 (provided at the end of this report) summarizes sample collection dates, sample numbers, sample locations, laboratories, sample types, sample matrix, analysis methods, and SDG numbers. Laboratory data packages for the January 2021 quarterly groundwater monitoring event are provided in Attachment B-2. Stage 2B data validation was performed for all analytical results obtained from the January 2021 quarterly groundwater monitoring event. The following QC elements were included in the Stage 2B data validation:

- Sample preservation and sample extraction and analysis holding times
- Laboratory method blanks
- Initial and continuing calibration blanks (metals and anions analyses only)
- Surrogate recoveries (organic analyses)
- Laboratory control sample (LCS)/laboratory control sample duplicate (LCSD) recoveries

- Matrix spike (MS)/matrix spike duplicate (MSD) recoveries
- Relative percent differences (RPDs)
- Initial calibration and verifications
- Continuing calibration verifications (CCVs)
- Inductively coupled plasma (ICP) interference check samples (ICS) (metal analysis only)
- ICP serial dilutions (metal analysis only)
- Sample confirmation (EDB analysis only)
- Field blanks
- Field duplicates

The Stage 2B data validation was performed in accordance with the guidelines and control criteria specified in the following documents:

- QAPP (KAFB, 2020)
- *DoD Quality Systems Manual for Environmental Laboratories, Version 5.3* (2019)
- *Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (2006), SW-846* (EPA, 1996 and updates)
- *Standard Methods for the Examination of Water and Wastewater (21st Edition)* (American Public Health Association et al., 2005)
- *USEPA Contract Laboratory Program, National Functional Guidelines for Organic Superfund Methods Data Review, Final* (EPA, 2017a)
- *USEPA Contract Laboratory Program*, *National Functional Guidelines for Inorganic Superfund Methods Data Review*, *Final* (EPA, 2017b)
- DoD General Data Validation Guidelines (2018)

Analytical data were reviewed in terms of precision, bias, representativeness, comparability, and completeness as follows:

- *Bias* is demonstrated by recovery of target analytes from fortified blank and sample matrices, LCS/LCSD, and MS/MSD, respectively. For organic methods, bias is also demonstrated through recovery of surrogates from each field and QC sample. The recovery of target analytes from fortified samples is compared with the acceptance criteria defined in the QAPP (KAFB, 2020) and DoD Quality Systems Manual (QSM). When the acceptance criteria are not available in the QAPP or DoD QSM, results are compared with the laboratory in-house control limits. When these criteria are not met, the data are qualified accordingly.
- *Precision* is expressed as the RPD between the results of replicate sample analyses: sample duplicates, LCSDs, and MSDs. When analyte RPDs exceed the acceptance criteria, the data are qualified accordingly.
- *Representativeness* of the samples submitted for analysis is ensured by adherence to standard sampling techniques and protocols.
- *Comparability* of sample results is ensured through the use of approved sampling and analysis methods.
- *Completeness* is expressed as a ratio of the number of usable data points to the total number of analytical data results.

The following sections present the 2B data validation findings. The discussion summarizes data quality exceedances and their potential impact on the quality and usability of analytical results. Attachment B-1, Table 2 presents definitions of data qualification and reason codes applied to the analytical results. Attachment B-1, Table 3 summarizes the qualified data.

1.1 Data Quality Outliers

1.1.1 Sample Preservation and Sample Extraction and Analysis Holding Times (Reason Code H)

The sample coolers and samples contained within were received intact at the laboratory and were held within the required 0 to 6 degrees Celsius, and when required, were chemically preserved in accordance with EPA and SM preservation requirements.

Sample holding times were evaluated by comparing the sample collection dates to the sample extraction and analysis dates. Extraction and analysis holding times were reviewed for all samples to determine the validity of the sample results. The extraction and analysis holding time requirements were achieved for all samples and for all methods with the exception of nitrate as nitrogen, nitrite as nitrogen, and phosphorus for sample 106MW2S-LTM-011321. The impacted sample was delayed arriving at the laboratory due to a shipping company error. Hold times were marginally exceeded, which resulted in the data being qualified as estimated (J/UJ).

1.1.2 Laboratory Method Blanks (Reason Code B1)

The field sample results were evaluated with respect to the laboratory method blank prepared and analyzed for each analytical batch, and for each analytical method. No target analytes were detected in the laboratory method blanks at concentrations that would impact any associated sample results.

1.1.3 Initial and Continuing Calibration Blanks (Reason Code B2)

In addition to the laboratory method blanks for metals and anions analyses, initial and continuing calibration blank results were reviewed to ensure that the instrument was free of contamination prior to the analyses. All initial and continuing calibration blanks were free of metals and anions.

1.1.4 Surrogate Recoveries (Reason Code S)

Surrogate standards are organic compounds added to field and laboratory QC samples for organic analysis to evaluate the matrix effect and method performance on an individual sample basis. Surrogates in all samples analyzed for VOCs were recovered within the accuracy specifications.

1.1.5 Laboratory Control Sample/Laboratory Control Sample Duplicate Recoveries and Precisions (Reason Codes L, D3, and D1)

The LCS is an aliquot of analyte-free matrix spiked with target analytes that is prepared with each analytical batch and with each analytical method. The recovery of target analytes from the LCS analysis is a measurement of method performance in an interference-free sample matrix. The LCS results met the bias and precision acceptance criteria for all batches and for all analyses.

1.1.6 Matrix Spike/Matrix Spike Duplicate Recoveries and Precisions (Reason Codes M and D2)

The MS and MSD samples are a portion of a field sample spiked with target analytes that are prepared with each analytical batch and with each method. The MS/MSD results are used to evaluate any bias introduced to the method due to matrix interference, and to measure bias and precision for each analytical batch.

In accordance with the site-specific QAPP requirements (KAFB, 2020), the MS/MSD samples are to be collected at a rate of 1 per 20 groundwater samples or 5 percent (%). During the January 2021 quarterly monitoring event, one MS/MSD sample was collected; thus, achieving the 5% MS/MSD sample frequency. Although additional MS/MSD sample volumes were not provided to the laboratory, the laboratory performed MS/MSD analyses on site-specific samples to meet their internal QC frequency requirements and to verify the presence of a matrix effect and its potential impact on the precision and bias of the analytical results.

The following site-specific groundwater samples were spiked for MS/MSD analysis:

Well Location	Sample Number	MS/MSD Analysis
January 2021 Groundwater Monitoring Event		
KAFB-106064	106064-LTM-011121-FD	Anions
KAFB-106MW2I	106MW2I-LTM-011121	VOCs, Anions (Chloride only), and dissolved ortho-phosphate
KAFB-106EX1	106EX1-LTM-011221	Anons

Well Location	Sample Number	MS/MSD Analysis
FAFB-106MW2S	106MW2S-LTM-011321	VOCs, EDB, total and dissolved metals, anions, dissolved ortho-phosphate, iodide, dissolved gases, and fatty acids

The majority of the MS results met the established bias and precision requirements; however, MS recovery biases were observed for VOC, EDB, anions, and metals analyses, which are summarized as follows:

Analytical Method	Spiked Sample	MS Recovery Outlier (%)	Control Limit (%)	Data Qualification
January 2021 Quarterly Groundwater Monitoring Event				
SW9056A	106064-LTM-011121-FD	Nitrite (106/**115**)	87-111	No qualification
SW8260C	106MW2I-LTM-011121	Naphthalene (76/93; **20**)	61-128; 20	No qualification
SW8260C	106MW2S-LTM-011321	Benzene (93.2/**75.8**)	79-120	J
		tert-Butylbenzene (**126**/120)	78-124	No qualification
SW8011	106MW2S-LTM-011321	1,2-Dibromoethane (**58.4**/**57.6**)	60-140	J
SW6020A	106MW2S-LTM-011321	Lead (**80.9**/87.9)	88-115	J
		Iron (**77.2**/90.2)	87-118	J
		Manganese (**-663**/**-56.8**)	87-115	No qualification

As indicated above, the reported MS/MSD recovery for nitrite and tert-butylbenzene and/or MS/MSD RPD for naphthalene marginally exceeded the upper control limit, No data qualification was applied to any impacted samples as the listed anions and VOCs in the spiked sample were not detected and were not affected by the high biased MS/MSD recoveries and/or calculated MS/MSD RPD. It should be noted that the LCS results associated with the non-complaint batch met the bias and precision control criteria, which demonstrated that acceptable batch bias and precision were achieved for the VOC analysis.

In addition to above, the reported MS and MSD recoveries were outside the accuracy specifications for manganese in the spiked sample (106MW2S-LTM-011321). These non-compliant MS/MSD results could be attributed to a matrix effect. In the spiked sample, the parent concentration of manganese exceeded four times their respective spiked levels. These elevated sample concentrations produced matrix

interference, which affected the accuracy of the MS/MSD analyses. Therefore, no data qualification was applied to the manganese result.

Except as noted, the MS precision and bias results were acceptable for all other analyses.

1.1.7 Initial Calibration (Reason Code G)

Instrument calibration is performed for VOC, EDB, metals, anions, dissolved gases, and fatty acids analyses according to the EPA Method requirements (EPA, 1996). The linear analytical range is established for each method by analysis of calibration standards prepared at increasing concentrations that cover the expected sample concentrations. The acceptability of the initial calibration is determined by calculation of a percent relative standard deviation or coefficient. The initial calibration results were acceptable for all the listed analyses.

Immediately after the initial calibration for each analysis, initial calibration verification was conducted at the mid-point of instrument calibration range by using a second-source calibration standard to verify the accuracy of the initial calibration. The review indicated acceptable initial calibration verification results for all target analytes.

1.1.8 Continuing Calibration Verification (Reason Code C)

Routinely during sample analysis, the stability of the analytical system is monitored by analysis of continuing calibration standards at concentrations near the mid-point of the instrument calibration range. The percent difference (%D) values between the relative response factor (RRF) in the initial calibration and the RRF in the continuing calibration met the continuing calibration requirements for VOC, EDB, metals, anions, dissolved gases, and fatty acids analyses with the exception of the following analytes:

Analytical Method	Spiked Sample	Analyte	Bias	CCV Control Limit (%)	Data Qualification
January 2021 Quarterly Groundwater Monitoring Event					
E300	106063-LTM-011121	Iodide	High bias	90-110	J
	106064-LTM-011121				J
	106064-LTM-011121-FD				J
	106IN1-LTM-011121				J
	106MW2S-LTM-011321				J
E300 (Mod)	106063-LTM-011121	Formic Acid	Low bias	90-110	J
	106064-LTM-011121				J
	106064-LTM-011121-FD				J
	106EX1-LTM-011221				J
	106EX2-LTM-011121				J
	106IN1-LTM-011221				J
	106MW1I-LTM-011221				J
	106MW1S-LTM-011221				J
	106MW2I-LTM-011121				J
	106MW2S-LTM-011321				J

1.1.9 Interference Check Samples (Reason Code O)

The ICS verifies the inter-element and background correction factors. An ICS was analyzed at the required frequencies, and all ICS results were within the established control limit for EPA Method SW6020A for the January 2021 quarterly groundwater monitoring event.

1.1.10 ICP Serial Dilutions (Reason Code A)

The ICP serial dilution determines whether significant physical or chemical interferences exist due to sample matrix. When the concentration of an analyte exceeds 50 times the method detection limit, an ICP serial dilution is performed at a five-fold dilution and the results between the original analysis and the diluted analysis are compared. The results of the ICP serial dilution are deemed acceptable when a percent difference between the original analysis and the diluted analysis is less than or equal to 10%. An ICP serial dilution was performed on one groundwater sample (106MW2S-LTM-011321) collected during the January 2021 quarterly groundwater monitoring event. The ICP serial dilution results met the accuracy goal for total and dissolved metals.

1.1.11 Sample Confirmation (Reason Code D)

As required by the DoD and EPA, when samples are analyzed by either a gas chromatography or high-performance liquid chromatography method, all positive results, with the exception of total petroleum hydrocarbons as gasoline and diesel, must be confirmed by a second column or a different detector. As indicated in all SDGs for the January 2021 quarterly groundwater monitoring event, all positive EDB results reported by EPA Method SW8011 were confirmed by a second column, and the precision results between the primary and secondary columns were within the precision control limit for all the detected samples with the following exception:

Analytical Method	Sample Number	Primary/Secondary Column (ug/L)	RPD(%)	Control Limit (%)	Data Qualification
January 2021 Quarterly Groundwater Monitoring Event					
SW8011	106EX2-LTM-011121	EDB: 0.0526 / 0.014	91	40	J

As shown above, EDB was detected above the LOQ in the primary column and its detection was confirmed by the secondary column; however, the precision between the two columns was observed at 91%, which exceeds the precision control limit. As a result of the precision outlier, the result of EDB from the primary column was qualified as estimated (J) and reported in this report. The precision outlier does not affect the data usability as all other QC elements such as holding time, method blanks, LCS bias and precision, and calibration results were within their respective control criteria.

1.1.12 Trip Blanks (Reason Code K3)

Trip blanks were prepared by the laboratory and stored with the groundwater samples collected for VOCs analysis. In accordance with the site-specific QAPP requirements (KAFB, 2020), one trip blank is to be collected at a rate of one per cooler when sampling groundwater samples for VOC analysis. One trip blank was submitted with VOC samples collected on each day for the January 2021 quarterly monitoring event, which resulted in a total of three trip blanks. Attachment B-1, Table 4 presents detected trip blank

results and associated groundwater sample results. As shown on the table, all trip blanks were free from VOC contaminants.

1.1.13 Equipment Rinse Blanks (Reason Code K1)

Equipment rinse blanks are designed to check for contamination from sampling equipment, and the results for the equipment rinse blanks are used to evaluate the efficiency of equipment decontamination procedures.

In accordance with the site-specific QAPP requirements (KAFB, 2020), no equipment rinse blanks will be collected when dedicated or disposable sampling equipment is used to collect groundwater samples. When non-dedicated or non-disposable sampling equipment is used, one equipment rinse blank will be collected at a rate of one per day. During the January 2021 quarterly groundwater monitoring event, dedicated sampling equipment was used to collect groundwater samples. As no cross-contamination between wells or samples could occur, no equipment rinse blanks were necessary.

1.1.14 Field Duplicates

In accordance with the site-specific QAPP requirements (KAFB, 2020), field duplicate samples are to be collected at a minimum rate of 10% of the total number of groundwater samples. Field duplicate samples are evaluated by calculating the RPD between the parent sample and its duplicate. The RPD is calculated using the following equation:

$$RPD = /(S-D)/[(S+D)/2]/ x\ 100$$

Where:

S = sample result
D = duplicate result

Acceptable precision control criteria are established at less than or equal to 35% for water samples. The RPD is calculated between pairs of field duplicate samples when both results are reported at or above the LOQ.

One field duplicate pairs were collected from well KAFB-106064 during the January 2021 quarterly groundwater monitoring event; thereby, achieving the 10% of the field duplicate sample frequency requirement. The duplicate pairs were analyzed for VOC, EDB, total and dissolved metals, anions, dissolved ortho-phosphate, alkalinity, iodide, fatty acids, and dissolved gases.

Attachment B-1, Table 5 presents the field duplicate results from the January 2021 quarterly groundwater monitoring event. As indicated in Attachment B-1,Table 5, the field RPDs for all the detected pairs ranged from 0 to 15.4% and met the 35% precision goal for all analyses. The field duplicate results demonstrate acceptable overall field sampling and analytical precision for all methods.

1.2 Completeness

The following sections present a discussion of technical and holding time completeness for the January 2021 quarterly groundwater monitoring event. Completeness results are calculated for project samples that will be used for project decisions. For information purposes, completes results are also calculated for field QC samples. Completeness results for both project samples and field QC samples are presented in Attachment B-1, Table 6.

1.2.1 Technical Completeness

Technical completeness is a quantitative measure of the data usability based on the number of rejected data compared to the total number of sample results. The technical completeness goal for each method is equal to or greater than 90%. The technical completeness calculation considers all data that are not rejected to be usable.

The technical completeness is calculated as follows:

$$\% \text{ Technical Completeness} = \frac{\text{Number of Usable Results}}{\text{Total Number of Results}} \times 100$$

Despite the exceedances discussed in the previous sections, all qualified data is still considered usable. The technical completeness was 100% for all methods exceeding the 90% technical completeness objective. Therefore, the project data quality objectives were achieved for all methods for the January 2021 quarterly groundwater monitoring event.

1.2.2 Holding Time Completeness

Holding time completeness is a quantitative determination of the number of samples extracted and analyzed within their respective holding times to the total number of samples collected. The holding time completeness goal is 100% for each method. Holding time completeness is calculated as follows:

$$\% \text{ Holding Time Completeness} = \frac{\text{Number of Holding Time Compliant Results}}{\text{Total Number of Results}} \times 100$$

As discussed in the previous sections, all groundwater samples collected from the January 2021 quarterly monitoring event were extracted and analyzed within their respective holding time requirements with the exception of three results.

Analysis	% Holding Time Completeness Calculation		
E365.3: ortho-Phosphorus	% Holding Time Completeness =	9 / 10 * 100	90%
SW9056: Anions	% Holding Time Completeness =	48 / 50 * 100	96%

Therefore, the holding time completeness objective was met for all methods with the exception of ortho-phosphorus by EPA 300 and anions by SW846 9056A.

1.3 Representativeness and Comparability

During sampling, samplers followed the approved site-specific QAPP requirements (KAFB, 2020) and established sampling SOPs to collect, preserve, document, and ship samples to off-site laboratories, thus ensuring the representativeness of the groundwater collected for the event.

From each groundwater monitoring well, VOC samples were collected in three 40-milliliter (mL) volatile organic analysis (VOA) vials preserved with hydrochloric acid, and EDB samples by EPA Method SW8011 were stored in three 40-mL VOA vials preserved with ice only. Upon sample receipt, the laboratory reviewed sample conditions to ensure that sample containers, preservatives (when applicable), and requested analyses matched the chain-of-custody requirements. The laboratory also inspected VOA vials to verify the presence or absence of any headspace. As documented on the laboratory sample receipt form, no headspace was present in any VOA vials submitted for VOCs and EDB analysis.

ALS in Houston is DoD ELAP certified and adhered to the most current EPA Method and standard method requirements, project QAPP (KAFB, 2020), and DoD QSM (2019) requirements to prepare, analyze, and report the data. This ensures the comparability of the analytical results between different samples and different sampling events. Stage 2B data validation was performed on 100% of the groundwater data to verify that the laboratories complied with the DoD QSM, project QAPP, and method requirements. Analytical results that were outside the established QC requirements were qualified and the data quality and usability were discussed in the previous sections. Based on a review of the completed sample collection logs, chain-of-custody forms, sample receipt forms, and laboratory data packages, the analytical data reported for the event has met the comparability requirements.

1.4 Summary

The analytical data reported for the events have been reviewed for precision, bias, representativeness, comparability, and completeness. Data quality exceedances consisted of holding time exceedances, method blank contamination, non-compliant MS/MSD recoveries and dual column precision, and continuing calibration verification exceedance. The affected data were qualified as estimated or not detected. The 90% technical completeness goal was achieved for all methods for the January 2021 quarterly groundwater monitoring event. All data are usable for their intended purposes.

Data Qualifier Definitions for Organic Data Review

Qualifier	Definition
	No Qualifier indicates that the data are acceptable both qualitatively and quantitatively.
U	The analyte was analyzed for but was not detected above the reported limit of quantitation.
J	The analyte was analyzed for and was positively identified, but the reported numerical value may not be consistent with the amount actually present in the environmental sample. Results are estimated, although the data are considered usable and may be used as appropriate to meet project objectives. Results are qualitatively acceptable and quantitatively uncertain.
J-	The analyte was positively identified; the associated numerical value is its approximate concentration with a low bias in the sample.
J+	The analyte was positively identified; the associated numerical value is its approximate concentration with a high bias in the sample.
N	The analysis indicates the presence of an analyte for which there is presumptive evidence to make a “tentative identification.”
NJ	The analysis indicates the presence of an analyte that has been ”tentatively identified,” and the associated value represents its approximate concentration.
UJ	The analyte was not detected above the reported limit of quantitation. However, the reported limit of quantitation is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
X	The analyte was analyzed for, but the presence or absence of the analyte has not been verified. Re-sampling and re-analysis may be necessary to confirm or deny the presence of the analyte. Results are rejected, and data are unusable for any purposes.

Data Qualifier Definitions for Inorganic Data Review

Qualifier	Definition
	No Qualifier indicates that the data are acceptable both qualitatively and quantitatively.
U	The analyte was analyzed for but was not detected above the level of the reported value. The reported value is the limit of quantitation for water and soil for all the analytes except cyanide and mercury. For cyanide and mercury, the reported value is the contract-required detection limit.
J	The analyte was analyzed for and was positively identified, but the reported numerical value may not be consistent with the amount actually present in the environmental sample. Results are estimated, although the data are considered usable and may be used as appropriate to meet project objectives. Results are qualitatively acceptable and quantitatively uncertain.
J-	The analyte was positively identified; the associated numerical value is its approximate concentration with a low bias in the sample.
J+	The analyte was positively identified; the associated numerical value is its approximate concentration with a high bias in the sample.
UJ	The analyte was analyzed for but was not detected above the reported value. The reported value may not accurately or precisely represent the sample limit of quantitation.
X	The analyte was analyzed for, but the presence or absence of the analyte has not been verified. Re-sampling and re-analysis may be necessary to confirm or deny the presence of the analyte. Results are rejected, and data are unusable for any purposes.

Table 2. Data Qualification Flags and Reason Codes (concluded)

Reason Codes for Data Review and Validation

Reason Code	Description
A	Serial dilution outside criteria (Level IV).
B1	Method blank contaminants above reporting limit.
B2	Calibration blank contaminants above reporting limit.
B2, Bias Flag "-"	Calibration blank indicates negative interference; false negatives may be present.
C	Calibration outside control limits.
D	Sample results precision between primary and secondary columns outside control limit.
D1	Sample duplicate RPD outside control limit.
D2	Matrix duplicate RPD outside control limit.
D3	LCSD RPD outside control limit.
E	The sample results exceed the linear calibration range of the instrument.
F	Hydrocarbon pattern does not match hydrocarbon pattern in the standard.
G1	Initial calibration relative standard deviation outside control limit.
G2	Initial continuing calibration RRF outside control limit.
G3	Continuing calibration RRF outside control limit.
H	Holding time exceeded.
I	Internal standard recovery outside control limit.
K1	Equipment rinsate contamination.
K2	Ambient blank contamination.
K3	Trip blank contamination.
L	LCS outside control limits.
M	MS outside control limits.
O	Interference check sample outside acceptance criteria.
P	Analyte qualified based on the professional judgment of the reviewer.
S	Surrogate recovery outside control limit.
T	Temperature outside acceptance criteria.
Tr	Value reported detected between the detection limit and LOQ.
W	Pesticide breakdown outside criteria (Level IV).
X	Raised reporting limit due to matrix interference or high analyte concentration.
Y	Analyte was not confirmed by a second column.

Notes:
Please see Attachment B-1 Table 2 for definitions of qualifiers and reason codes
mg/L = milligrams per liter
µg/L = micrograms per liter
REG = regular sample
FD = field duplicate
WG = groundwater
NC = Not calculated
VQ = validation qualifier
D = dissolved
N = not filtered
T = Total

Field precision is only calculated when the analyte concentration is reported at or above the limit of quantitation in both the primary and the duplicate sample.

Precision formula = 100 x |Primary Result - Duplicate Result| / ((Primary Result + Duplicate Result) / 2)

Attachment B-1 Table 6: Holding Time and Technical Completeness

Analytical Method		Number of Analytes	Number of Samples	Number of Results	Number of Holding Time Compliant Results	Number of Useable Results	Holding Time Completeness [Goal = 100 %] (percent)	Technical Completeness [Goal = 90 %] (percent)
Environmental Samples								
	E300	1	10	10	10	10	100	100

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
M	Manual integrated compound.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Narrative

Job Narrative
410-25437-1

Receipt
The samples were received on 1/5/2021 10:53 AM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.2°C, 0.4°C, 0.5°C and 0.6°C

GC Semi VOA
Method 8011_DOD5: The continuing calibration verification (CCV) associated with batch 410-83799 recovered above the upper control limit for Ethylene Dibromide on the primary column. The data is reported for Ethylene Dibromide from the confirmation column. The associated sample is: GW205-211 (410-25437-8).

Method 8011_DOD5: The continuing calibration verification (CCV) associated with batch 410-83116 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane-(Surrogate). The samples associated with this CCV were non-detects for the affected analytes; Ethylene Dibromide. Therefore, the data have been reported. The associated samples are: GW224-211 (410-25437-12), TB211-03 (410-25437-13), GW218-211 (410-25437-14), GW218-611 (410-25437-15), GW217-211 (410-25437-16) and TB211-04 (410-25437-17).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

List Source: Eurofins Lancaster Laboratories Env

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.

HPLC/IC

Qualifier	Qualifier Description
D	The reported value is from a dilution.
U	Undetected at the Limit of Detection.

Metals

Qualifier	Qualifier Description
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

General Chemistry

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)

Narrative

Job Narrative
410-25516-1

Receipt
The samples were received on 1/6/2021 9:29 AM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 5 coolers at receipt time were 0.2°C, 0.3°C, 0.3°C, 0.4°C and 0.6°C

GC Semi VOA
Method 8011_DOD5: The continuing calibration verification (CCV) associated with batch 410-83116 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane. The samples associated with this CCV were non-detects for the affected analytes; Ethylene Dibromide. Therefore, the data have been reported. The associated samples are: TB211-05 (410-25516-1), GW235-438-211 (410-25516-2), GW235-472-211 (410-25516-3) and (410-25516-A-3-A DU).

Method 8011_DOD5: The continuing calibration verification (CCV) associated with batch 410-83799 recovered above the upper control limit for 1,1,2,2-Tetrachloroethane. The samples associated with this CCV were non-detects for the affected analytes; Ethylene Dibromide. Therefore, the data have been reported. The associated samples are GW235-501-211 (410-25516-4), TB211-06 (410-25516-5), GW236-436-211 (410-25516-6), GW236-436-611 (410-25516-7), GW236-470-211 (410-25516-8), GW236-499-211 (410-25516-9), TB211-07 (410-25516-10), GW031-211 (410-25516-11), GW030-211 (410-25516-12), GW029-211 (410-25516-13), TB211-08 (410-25516-14), GW232-211 (410-25516-15), GW231-211 (410-25516-16), TB211-09 (410-25516-17), GW242-418-211 (410-25516-18) and GW206-211 (410-25516-19).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: EA Engineering, Science, and Technology
Job ID: 410-25516-1
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Laboratory: Eurofins Lancaster Laboratories Env, LLC

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
A2LA	Dept. of Defense ELAP	1.01	01-31-21

Method Summary

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Job ID: 410-25516-1

Method	Method Description	Protocol	Laboratory
8011	EDB, DBCP, and 1,2,3-TCP (GC)	SW846	ELLE
EPA 300.0 R2.1	Anions, Ion Chromatography	EPA	ELLE
6010C	Metals (ICP)	SW846	ELLE
6020A	Metals (ICP/MS)	SW846	ELLE
2320B-2011	Alkalinity, Total	SM	ELLE
353.2	Nitrogen, Nitrate-Nitrite	MCAWW	ELLE
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	ELLE
8011	Microextraction	SW846	ELLE
Non-Digest Prep	Preparation, Non-Digested Aqueous Metals	EPA	ELLE

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC Semi VOA

Qualifier	Qualifier Description
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

HPLC/IC

Qualifier	Qualifier Description
B	Blank contamination: The analyte was detected above one-half the reporting limit in an associated blank.
D	The reported value is from a dilution.
E	Result exceeded calibration range.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
U	Undetected at the Limit of Detection.

Metals

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

General Chemistry

Qualifier	Qualifier Description
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)

Definitions/Glossary

Client: EA Engineering, Science, and Technology
Job ID: 410-25683-1
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Job ID: 410-25683-1

Job ID: 410-25683-1

Laboratory: Eurofins Lancaster Laboratories Env, LLC

Narrative

Job Narrative
410-25683-1

Receipt
The samples were received on 1/7/2021 11:10 AM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 0.1°C, 0.2°C, 0.3°C and 0.4°C

GC Semi VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
Method 300_ORGFM_28D: The method blank for analytical batch 410-84268 contained Chloride above the method detection limit (MDL). Associated sample(s) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Detection Summary

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Job ID: 410-25683-1

Client Sample ID: TB211-10 — Lab Sample ID: 410-25683-1

No Detections.

Client Sample ID: GW201-211 — Lab Sample ID: 410-25683-2

No Detections.

Client Sample ID: GW202-211 — Lab Sample ID: 410-25683-3

No Detections.

Client Sample ID: GW203-211 — Lab Sample ID: 410-25683-4

No Detections.

Client Sample ID: TB211-11 — Lab Sample ID: 410-25683-5

No Detections.

Client Sample ID: GW241-428-211 — Lab Sample ID: 410-25683-6

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable (</=6C, not frozen).	True	
Cooler Temperature is recorded.	True	
WV: Container Temperature is acceptable (</=6C, not frozen).	N/A	
WV: Container Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	N/A	
Is the Field Sampler's name present on COC?	True	
Sample Preservation Verified.	N/A	
Residual Chlorine Checked.	N/A	
Sample custody seals are intact.	True

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Analytical test results meet all requirements of the associated regulatory program (e.g., NELAC (TNI), DoD, and ISO 17025) unless otherwise noted under the individual analysis. Data qualifiers are applied to note exceptions. Noncompliant quality control (QC) is further explained in narrative comments.
· QC results that exceed the upper limits and are associated with non-detect samples are qualified but further narration is not required since the bias is high and does not change a non-detect result. Further narration is also not required with QC blank detection when the associated sample concentration is non-detect or more than ten times the level in the blank.
· Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD is performed, unless otherwise specified in the method.
· Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.
Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Measurement uncertainty values, as applicable, are available upon request.

Test results relate only to the sample tested. Clients should be aware that a critical step in a chemical or microbiological analysis is the collection of the sample. Unless the sample analyzed is truly representative of the bulk of material involved, the test results will be meaningless. If you have questions regarding the proper techniques of collecting samples, please contact us. We cannot be held responsible for sample integrity, however, unless sampling has been performed by a member of our staff. Times are local to the area of activity. Parameters listed in the 40 CFR Part 136 Table II as "analyze immediately" and tested in the laboratory are not performed within 15 minutes of collection.

This report shall not be reproduced except in full, without the written approval of the laboratory.

WARRANTY AND LIMITS OF LIABILITY - In accepting analytical work, we warrant the accuracy of test results for the sample as submitted. The foregoing express warranty is exclusive and is given in lieu of all other warranties, expressed or implied, except as otherwise agreed. We disclaim any other warranties, expressed or implied, including a warranty of fitness for particular purpose and warranty of merchantability. In no event shall Eurofins Lancaster Laboratories Environmental, LLC be liable for indirect, special, consequential, or incidental damages including, but not limited to, damages for loss of profit or goodwill regardless of (A) the negligence (either sole or concurrent) of Eurofins Lancaster Laboratories Environmental and (B) whether Eurofins Lancaster Laboratories Environmental has been informed of the possibility of such damages. We accept no legal responsibility for the purposes for which the client uses the test results. Except as otherwise agreed, no purchase order or other order for work shall be accepted by Eurofins Lancaster Laboratories Environmental which includes any conditions that vary from the Standard Terms and Conditions, and Eurofins Lancaster Laboratories Environmental hereby objects to any conflicting terms contained in any acceptance or order submitted by client.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
D	The reported value is from a dilution.
E	Result exceeded calibration range.
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
U	Undetected at the Limit of Detection.

GC Semi VOA

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
D	The reported value is from a dilution.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.

HPLC/IC

Qualifier	Qualifier Description
D	The reported value is from a dilution.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
M	Manual integrated compound.
U	Undetected at the Limit of Detection.

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.

General Chemistry

Qualifier	Qualifier Description
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
1C	Result is from the primary column on a dual-column method.
2C	Result is from the confirmation column on a dual-column method.
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)

Definitions/Glossary

Client: EA Engineering, Science, and Technology
Job ID: 410-25765-1
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Narrative

Job Narrative
410-25765-1

Receipt
The samples were received on 1/8/2021 11:11 AM; the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 6 coolers at receipt time were 0.2°C, 0.3°C, 0.4°C, 0.5°C, 0.7°C and 0.7°C

GC/MS VOA
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

GC Semi VOA
Method 8011: The continuing calibration verification (CCV) associated with batch 410-84285 recovered above the upper control for 1,1,2,2-Tetrachloroethane (surrogate) on the confirmation.column. Ethylene Dibromide is reported from the primary column. The associated sample is: GW243-425-211 (410-25765-16).

Method 8011: The continuing calibration verification (CCV) associated with batch 410-84416 recovered above the upper control for 1,1,2,2-Tetrachloroethane. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported. The associated samples are: TB211-14 (410-25765-1), GW240-449-211 (410-25765-2), GW244-445-(410-25765-3), GW245-460-211 (410-25765-4), TB211-15 (410-25765-5) and GW247-450-211 (410-25765-7).

Method 8011: The continuing calibration verification (CCV) associated with batch 410-84416 recovered above the upper control for 1,1,2,2-Tetrachloroethane on the primary column. Ethylene Dibromide reported from the confirmation column. The associate sample is: GWS4-446-211 (410-25765-6).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

HPLC/IC
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry
No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Lab Sample ID: LCSD 410-83805/3-A
Matrix: Water
Analysis Batch: 84089

Client Sample ID: Lab Control Sample Dup
Prep Type: Total Recoverable
Prep Batch: 83805

Analyte	Spike Added	LCSD Result	LCSD Qualifier	Unit	D	%Rec	%Rec. Limits	RPD	RPD Limit
Arsenic	0.0600	0.0631		mg/L		105	84 - 116	3	20
Lead	0.0300	0.0308		mg/L		103	88 - 115	0	20

QC Sample Results

Client: EA Engineering, Science, and Technology
Project/Site: Kirtland AFB - GWM & IRM Op Mod

Job ID: 410-25765-1

Method: 6020A - Metals (ICP/MS) (Continued)

Lab Sample ID: MB 410-83845/1-A
Matrix: Water
Analysis Batch: 84090

Client Sample ID: Method Blank
Prep Type: Total Recoverable
Prep Batch: 83845

Analyte	MB Result	MB Qualifier	LOQ	LOD	DL	Unit	D	Analyzed	Dil Fac
Arsenic	0.0016	U	0.0020	0.0016	0.00068	mg/L		01/12/21 12:55	1
Lead	0.00025	U	0.00050	0.00025	0.000071	mg/L		01/12/21 12:55	1

Lab Sample ID: LCS 410-83845/2-A
Matrix: Water
Analysis Batch: 84090

Client Sample ID: Lab Control Sample
Prep Type: Total Recoverable
Prep Batch: 83845

Analyte	Spike Added	LCS Result	LCS Qualifier	Unit	D	%Rec	%Rec. Limits
Arsenic	0.0600	0.0641		mg/L		107	84 - 116
Lead	0.0300	0.0307		mg/L		102	88 - 115

Method: 2320B-2011 - Alkalinity, Total

Lab Sample ID: MB 410-84495/19
Matrix: Water
Analysis Batch: 84495

Client Sample ID: Method Blank
Prep Type: Total/NA

Analyte	MB Result	MB Qualifier	LOQ	LOD	DL	Unit	D	Analyzed	Dil Fac
Bicarbonate Alkalinity as CaCO3	6.0	U	8.0	6.0	2.6	mg/L		01/12/21 21:22	1
Carbonate Alkalinity as CaCO3	6.0	U	8.0	6.0	2.6	mg/L		01/12/21 21:22	1
Total Alkalinity as CaCO3 to pH 4.5	6.0	U	8.0	6.0	2.6	mg/L		01/12/21 21:22	1

Lab Sample ID: MB 410-84495/49
Matrix: Water
Analysis Batch: 84495

Client Sample ID: Method Blank
Prep Type: Total/NA

Analyte	MB Result	MB Qualifier	LOQ	LOD	DL	Unit	D	Analyzed	Dil Fac
Bicarbonate Alkalinity as CaCO3	6.0	U	8.0	6.0	2.6	mg/L		01/13/21 00:45	1
Carbonate Alkalinity as CaCO3	6.0	U	8.0	6.0	2.6	mg/L		01/13/21 00:45	1
Total Alkalinity as CaCO3 to pH 4.5	6.0	U	8.0	6.0	2.6	mg/L		01/13/21 00:45	1

Lab Sample ID: LCS 410-84495/21
Matrix: Water
Analysis Batch: 84495

Client Sample ID: Lab Control Sample
Prep Type: Total/NA

Analyte	Spike Added	LCS Result	LCS Qualifier	Unit	D	%Rec	%Rec. Limits
Total Alkalinity as CaCO3 to pH 4.5	189	177		mg/L		93	82 - 106

Lab Sample ID: LCS 410-84495/51
Matrix: Water
Analysis Batch: 84495
