Discharge Permit Summary

I. INTRODUCTION

The New Mexico Environment Department (NMED) issues this groundwater discharge permit Renewal (Discharge Permit or DP-1800) to the West Las Vegas School District (Permittee) pursuant to the New Mexico Water Quality Act (WQA), NMSA 1978 §§74-6-1 through 74-6-17, and the New Mexico Water Quality Control Commission (WQCC) Ground and Surface Water Protection Regulations, 20.6.2 NMAC.

NMED's purpose in issuing this Discharge Permit, and in imposing the requirements and conditions specified herein, is to control the discharge of water contaminants from West Las Vegas Schools (Facility) in order to protect groundwater and those segments of surface water gaining from groundwater inflow for present and potential future use as domestic and agricultural water supply and other uses, and to protect public health. It is NMED's determination in issuing this Discharge Permit that the Permittee has met the requirements of Subsection C of 20.6.2.3109 NMAC. The Permittee is responsible for complying with the terms and conditions of this Discharge Permit pursuant to Section 20.6.2.3104 NMAC; failure to do so may result in enforcement action by NMED (20.6.2.1220 NMAC).

Described below are the activities that produce the discharge, the location of the discharge, and the quantity, quality and flow characteristics.

The City of Las Vegas wastewater treatment facility (WWTF) transfers treated wastewater (reclaimed domestic wastewater) to the Facility in accordance with DP-1118. The Permittee discharges a volume of up to 150,000 gallons per day (gpd) of reclaimed domestic wastewater by spray irrigation to 15-acres of baseball fields (via a 10,000-gallon storage tank), a five-acre high school athletic field and a five-acre middle school athletic field.

The discharge may contain water contaminants or toxic pollutants elevated above the standards of Section 20.6.2.3103 NMAC and is not subject to the exemption at Subsection 20.6.2.3105.A NMAC.

The irrigated fields are located on the west side of Cinder Road north of Palo Verde Drive (West Las Vegas Baseball Complex), 157 Moreno Street (West Las Vegas High School) and 1024 South Pacific Street (West Las Vegas Middle School), Las Vegas, San Miguel County. A discharge at the Facility is most likely to affect groundwater at a depth of approximately 6 to 20 feet and having a pre-discharge total dissolved solids (TDS) concentration of approximately 540 milligrams per liter.

NMED issued the original Discharge Permit to the Permittee on April 3, 2013. The application (i.e., discharge plan) associated with this Discharge Permit consists of the materials submitted by the Permittee dated June 25, 2018, and materials contained in the administrative record prior to issuance of this Discharge Permit.

The Permittee shall manage the discharge in accordance with all conditions and requirements of this Discharge Permit.

NMED reserves the right to require a Discharge Permit modification in the event NMED determines that the Permittee is or may be violating, or is likely to violate in the future, the requirements of 20.6.2 NMAC or the standards of Section 20.6.2.3103 NMAC. NMED reserves this right pursuant to Section 20.6.2.3109 NMAC. An NMED requirement to modify the Discharge Permit may result from a determination by the department that structural controls and/or management practices approved under this Discharge Permit are insufficiently protective of groundwater quality and human health. NMED reserves the right to require the Permittee implement abatement of water pollution and remediate groundwater quality.

NMED issuance of this Discharge Permit does not relieve the Permittee of the responsibility to comply with the WQA, WQCC Regulations, and any other applicable federal, state and/or local laws and regulations, such as zoning requirements and nuisance ordinances.

II. FINDINGS

In issuing this Discharge Permit, NMED finds the following.

1. The Permittee is discharging effluent or leachate from the Facility so that such effluent or leachate may move into groundwater of the State of New Mexico that has an existing concentration of 10,000 mg/L or less of TDS, within the meaning of Subsection A of 20.6.2.3101 NMAC, without exceeding standards of 20.6.2.3103 NMAC for any water contaminant.
2. The Permittee is discharging effluent or leachate from the Facility directly or indirectly into groundwater pursuant to this Discharge Permit and Sections 20.6.2.3000 through 20.6.2.3114 NMAC.
3. The discharge from the Facility is not subject to any of the exemptions of Section 20.6.2.3105 NMAC.

III. AUTHORIZATION TO DISCHARGE

The Permittee is responsible for ensuring that discharges authorized by this Discharge Permit are consistent with the terms and conditions herein pursuant to 20.6.2.3104 NMAC.

This Discharge Permit authorizes the Permittee to discharge up to 150,000 gpd of treated wastewater (reclaimed domestic wastewater) transferred from the City of Las Vegas WWTF (DP-1118) for spray irrigation to 15 acres of baseball fields (via a 10,000-gallon storage tank), a five-acre high school athletic field, and a five-acre middle school athletic field.
